## TECHNICAL DATA

### SPECIFICATIONS

This safety glasses complies with **EN166 standards**.

You can find out in detail about the codes certified under the various international standards by consulting them on our website [www.libus.us](http://www.libus.us) and downloading the corresponding documentation accompanying the licences.

### LENS COLOURS

 Clear	General use.
 Yellow	Blocks blue light from the visible spectrum, increasing contrast and depth perception. Suitable for tasks in low-light environments. Not recommended for bright environments or where precise color recognition is required.
 Smoke Gray	Ideal for outdoor use where sunlight may cause visual fatigue. Provides good color recognition.
 Green	Provides protection against glare and UV radiation. Not suitable for welding tasks.
 Dark Green W3	Meets ANSI Z87.1 requirements for shade W3.
 Dark Green W5	Meets ANSI Z87.1 requirements for shade W5.
 Orange BL	Filters violet and blue light from UV lamps. Absorbs visible light up to 540nm. Applications: dentistry, medicine, laboratories, UV curing of coatings and inks.

### TREATMENTS

#### Mirrored (M)

Metallized film that reflects a large portion of incident light, suitable for outdoor use with intense solar reflections.

#### Anti-fog (AF)

Film resistant to moisture condensation on the lens.

#### Outdoor / Indoor (O/I)

Slightly metallized film that reduces solar light while maintaining adequate performance under artificial light. Ideal for users alternating between environments with artificial and bright natural light.

#### Anti-scratch (HC)

Film that protects the lens from everyday handling wear, extending its lifespan and enhancing vision.

## LIMITATIONS AND WARNINGS

It is made of materials that are not expected to cause adverse health effects; however, contact with the user's skin may cause allergies in highly sensitive individuals. If the protector is damaged it should be discarded and replaced. This goggle provides the protection indicated in the technical specifications and in accordance with the marking provided. Eye protectors marked with the letter "S" should not be used where there is a risk of impact from hard, sharp or pointed flying particles. Operating temperature: -5°C to +40°C.

## STORAGE

Keep in its original packaging, in a dry, clean place, away from direct sunlight, high temperature sources, vapours, solvents or chemicals. Temperature: -5°C to +50°C / Ambient relative humidity < 80%.

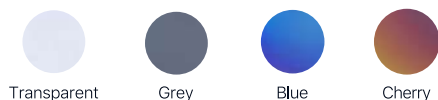

## CLEANING

It is recommended after each use, with warm running water and neutral soap or a cleaning solution specified for lenses. Do not use degreasing or chlorinated fluids or solvents.

## USE

- The lifespan of the eyewear after removal from its original packaging depends on the frequency and conditions of use.
- For daily use, it is recommended to replace it every 6 months. However, under extreme conditions, the protector may deteriorate more quickly; in such cases, discard the product and replace it with a new one.
- Do not attempt to repair it.
- No spare parts are available for this product.
- This shield should not be used over regular prescription glasses. If the goggle is damaged during use, leave the hazard area immediately and replace it with a new one.
